

PRODUCT INFORMATION SHEET

GRILL CLEANER

DESCRIPTION & USE

Grill Cleaner is a clear, nearly colourless liquid with very little odour. It is designed to clean heavily soiled ovens, grills, barbeque plates and deep friers.

FEATURES & BENEFITS

Grill Cleaner is highly caustic. This enables it to remove baked on soils with a minimum of effort.

Grill Cleaner is multi functional. It can clean ovens, grills, barbeque plates and deep friers so reducing the number of products used.

HOW TO USE

Grill Cleaner works best on a warm surface around 50 - 60 C. Do not use on very hot surfaces as the product will boil off and create corrosive fumes.

Spray or brush Grill Cleaner onto soiled surface. Do not spray over electrical connections, paint work or aluminium.

Always wear a full face shield or safety goggles, and rubber gloves when using Grill Cleaner.

When spraying adjust trigger spray to a coarse setting and pump slowly to minimise mist formation. When spraying in ovens spray sides and bottom first with the top sprayed last so product doesn't drop down on the hands off the top.

Only decant Grill Cleaner into a trigger spray labelled with a chemical resistant label with fully safety information.

HOW TO USE (CONTINUED)

To clean deep friers drain off fat and fill with water. Add Grill Cleaner at a rate of 1 cup per 10 litres capacity. Heat deep fryer till nearly boiling, then turn off and allow to soak for 30 minutes or more. Drain off and rinse with plenty of water to remove all residues.

TECHNICAL DETAILS

Grill Cleaner is a highly caustic liquid containing 300 g/l potassium hydroxide. It also contains water softening agents and a special caustic stable detergent.

SAFETY

Grill Cleaner is a dangerous product and must be used with extreme care. Ensure a Material Safety Data Sheet is available and read before the product is used. Always follow directions and wear protective equipment.

Grill Cleaner is designed to clean really dirty surfaces. If ovens, grills and hot plates are cleaned on a regular basis an alkaline detergent such as Chesser Multi Purpose Heavy Duty Cleaner could be used instead. This would be much safer to use. Chesser Creme Cleanser could be used to remove stubborn deposits.

PACKAGING

Grill Cleaner is available in 5 litre and 25 litre drums.
