

PRODUCT INFORMATION SHEET

FABRIC SOFTENER

Fabric Softener is an opaque blue liquid with a fresh floral fragrance. It is added to the final rinse to soften the fabric, reduce static build up and also to assist with ironing.

FEATURES

- Fabric Softener has a long lasting fresh floral fragrance. The same fragrance is used in Chesser laundry detergent powders, and in the floral liquid laundry detergent. This means the fragrance can build up in the wash and rinse to leave your clothes smelling clean and fresh.
- Fabric Softener is concentrated so only 25ml is needed to soften fabrics and reduce static build up. This is especially important in tumble dried clothes which can give strong static shocks when pulled out if softener isn't used.

HOW & WHERE TO USE

- Fabric Softener must be added to the final rinse. This stops reaction with detergents and rinsing away. Fabric Softener can be added to dispensers, or poured manually into the machine. For an average sized load use 25ml softener. Pour into the water not directly onto the clothes. Only use a fabric softener if the water is clear. If it is murky due to work on the mains or from using untreated river water discontinue use until water quality improves. If used in dirty water it will pull the discolouration onto the fabric making a stain.
- Fabric Softener may also be used as an ironing aid. Add 25ml to 500ml trigger spray and top up with water. Spray lightly over clothes.
