

PRODUCT INFORMATION SHEET

5 STAR

Premium Grade One Shot Laundry Powder

FEATURES & BENEFITS

- Complete one shot powder containing built in oxygen bleach and enzymes. For most washes simply add the 5 Star with no pretreatment or extra bleaches required. This makes it extremely easy to use.
- 5 Star has a controlled foam profile making it suitable for use in front or top loading machines.
- 5 Star contains a photochemical bleaching agent. When soaking in daylight or line drying it absorbs light energy and transmits it to oxygen molecules, activating them to become a bleaching agent. This action helps remove any residual staining whilst the clothes are drying.
- 5 Star contains high levels of water softening agents. This means it works well in all water conditions giving outstanding results every time.
- 5 Star also contains special additives to control the release of the oxygen bleach. These prevent rapid loss of bleach and so protect the fabric to give longer life.

HOW & WHERE TO USE

- 5 Star is extremely easy to use.
Domestic front loader – add $\frac{1}{4}$ cup per wash Top loader – add $\frac{1}{3}$ cup per wash.
For commercial machines use 50g ($\frac{1}{4}$ cup) per 5kg capacity. So for a typical 20kg machine add 1cup of 5 Star.

- Heavily soiled clothes need extra treatment for best results. Either carry out a prewash with extra 5 Star, or add extra 5 Star to the main wash.
Oily stains can be pretreated by spraying with Chesser Prewash Stain Remover. If the stains are bleachable, such as wine, cordial or coffee, the bleaching power can be increased by adding some Chesser Bright which contains more oxygen bleach than 5 Star.
- 5 Star gives best results between 50 - 70° C, as this temperature activates the oxygen bleach.
- Do not add chlorine bleach as it is incompatible with the oxygen bleach in 5 Star.
- 5 Star can also be used as a soak for heavily soiled linen. Add $\frac{1}{8}$ cup to a bucket, or $\frac{1}{4}$ cup to a laundry sink.
