

PRODUCT INFORMATION SHEET

ULTRA SHINE

Ultra Shine is added to the final rinse in dishwashing machines to make the water sheet off evenly to reduce drying time and leave items sparkling.

FEATURES

- Ultra Shine can be used in all dishwashers from large commercial machines down to domestic.
- Ultra Shine is designed for use in hard water areas in conjunction with Ultra Tech. The special additives in Ultra Shine will keep the rinse lines and jets scale free, whilst the Ultra Tech keeps the rest of the machine scale free.
- Ultra Shine is a concentrated rinse aid. Only a small amount is needed per cycle so a drum lasts a long time.
- The special blend of low foam detergents used makes the water sheet off easily, leading to reduced spotting and streaking, making glasses sparkle.

HOW & WHERE TO USE

- In commercial dishwashers Ultra Shine is usually added through an automatic feeder. This is adjusted by a Chesser technician to give optimum results.
- In domestic machines simply add Ultra Shine to the rinse aid holding tank when required.
